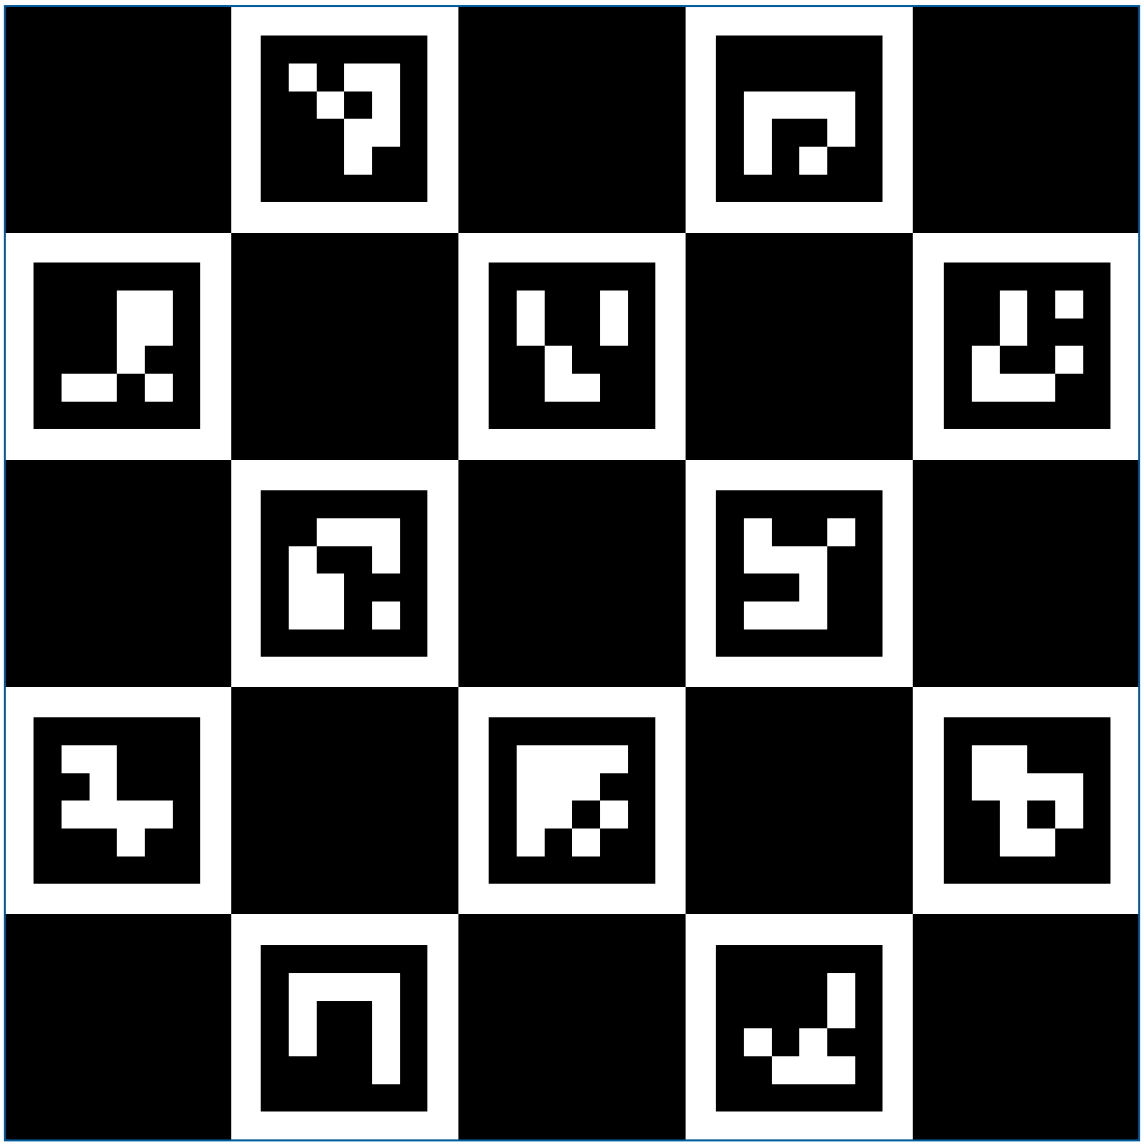
NOT FOR REAL CALIBRATION UNTIL MEASURED

VISION-01 existing design: ChArUco DICT_4X4_50 | 5 x 5 | 30 mm squares | 22 mm markers

Print only at 100% / Actual size. Board outer edge below is exactly 150 x 150 mm in this PDF.



Measure the black/white checkerboard outer edge, not this blue verification outline.

Coordinate origin: printed-face outer top-left; +X right, +Y down, +Z points through the board rear.

PRINT CHECK - NOT MEASURED

1. Print page 1 only on A4 using 100% / Actual size; disable fit-to-page and auto scaling.
2. Measure the checkerboard outer edge: X = 150.0 mm and Y = 150.0 mm.
3. Check multiple squares: 30.0 mm. Check markers: 22.0 mm. Record tool and readings.
4. Reject and remake if X/Y scale differs, the board bends, an edge is clipped, or a marker is obscured.
5. Do not set measured=true until physical dimensions, print scale, board ID, and measurement record are verified.

This PDF is an offline design artifact only; it is not a calibration result or a permission to capture samples.

Specification source: d1t_vision/config/board-design.example.json; measured=false preserved.
